

## To prepare images for print when captured from the Web using Adobe Photoshop CS4

This picture is the actual size that was captured from the Web.  
The pixels in the picture are for web use (100 pixels or 75 pixels/inch).  
Fewer pixels, smaller file... Image is a jpg file.

To prepare a high quality print, select **Image > Image Size**. Select Constrain Proportions. Deselect Resample image. This “grays out” the pixel dimensions, thereby not removing pixels from the image. Replace the resolution of 100 pixels/inch with 150 pixels/inch. Save as a .TIF file for printing.

This will print a very small picture,  
but of good quality.
