We need only have an agreement that the workers are not to be allowed to strike, no stoppage of work, no work shortage.

**SUB and Termination Pay**

Do we understand the concept of a work stoppage and a work shortage? The concept of a work stoppage is when the workers stop working because they do not have a contract that covers their working conditions. A work shortage is when the workers are not able to work because there are no jobs available.

**Why is this important?**

It is important to understand why General Electric is in the current situation. In the past, the company has faced financial problems due to a decrease in demand for its products. This has led to layoffs and reduced production. To avoid further financial problems, the company has decided to cut costs by reducing the workforce. This decision has led to job losses and decreased wages for those who remain employed.

**What should we do?**

We should demand better wages and working conditions. We should also demand that the company invest in new products and technologies to create new jobs.
