What is the CIO Wage Policy?

In seeking the mysteries of the Little Steel formulas and the upward adjustment of wages, workers are seeking a better way of life, a way that will bring them dignity and respect.

Wage rises come from under this formula, but the cost and the pain were never shared into effect.

Employers thus the case to a good wage system and a good wage bargain. But if there is no such case, there is no way to stop in the effort.

The CIO is the first to recognize the President's recent wage legislation, including the idea of wage stabilization, though it never considered the Little Steel formula as a possible means of bringing this about.

Wage raises were fixed from the start, but the cost and the pain were never shared into effect.

We must face the fact that the new formula for wages must be based on the needs of the workers, and that it must be based on the wage levels of the workers themselves.

Wage raises must be tied to the economic level of America.

To achieve a truly stabilized labor market, there must be a wage policy that is based on national economic conditions.

We cannot achieve this by merely raising wages, but we can achieve it by providing for a real increase in wages.

In a word, the stabilization program must be based on the needs of the workers and on the economic level of America.

In order to achieve this, a real increase in wages must be tied to the economic level of America.

Wage rises must be tied to the economic level of America.

We are seeking a better way of life, a way that will bring us dignity and respect.

Thank you for your understanding.
