We Are Headed for Depression?

In the past 100 years of this country’s history there have been 23 business cycles. In each, some 10 years have passed when prices were at high levels just as they are today.

What are the economic phenomena pointing to a depression?

Conflict prices in August were at the same level of 170.7 above the 1935-39 average. Corporation profits before taxes, on an annual basis, rose from 1941’s $5.8 billion to 1942’s $10 billion in the first quarter of 1942. By the end of 1935, however, profits were in the $12 billion range.

Real wages per hour have dropped in present times. Retail prices are falling in all consumer goods categories, mostly wool goods, shoes, radio, and small electrical appliances. Inventories have reached the lowest level in 20 years. Capital outlays are very low. The general strike, which has occurred in European and Australian coal fields, has increased the price of coal in this country by 50 cents per ton.

Strikes Victorious

A two-week UAW strike at Brier Manufacturing Company, Huntington, W.Va., ended with a wage increase of 12% on June 1. Another 1% will be paid in October. The company was ordered to pay back wages and ensure back-pay policy going forward.

President Albert J. Piggott of UAW was present at one of the meetings of the company’s board of directors. He was given a tour of the plant and was shown the new equipment that was installed during the strike.
