STATE COLLEGE NEWS

NEW YORK STATE COLLEGE FOR TEACHERS

ESTABLISHED BY THE CLASS OF 1918

VOL. IV NO. 4

ALBANY, N. Y., OCTOBER 9, 1919

$2.00 PER YEAR

Student Assembly Friday morning, October 3, was devoted to a memorial service in honor of Gertrude Crissy Valentine, both a student and teacher at State College, who gave her life in service. Dr. Richardson spoke of her desire to help in the war. "There is no one in our family to go," she said, "and I feel that I can do something for the Y. W. C. A.

Dr. Richardson is a close friend and associat of Miss Valentine, told of her pact, love, and love, and inspired life. She had formerly come to Albany Normal School as a student. Later she obtained her degree; she went to Vassar, where she was distinguished by her spirit of friendship, her wit, and keen sense for kindness. There she won the love and admiration of the students, faculty and trustees. "Her wit," said Dr. Richardson, "was as brilliant and keen as the French—her sense of humor akin to that of Charles Lamb.

After graduating from Vassar, Miss Valentine returned to State College, where she took a number of methods courses, meanwhile assisting the Dean and Registrar. She was then called as assistant in the Department of English Languages. At this time she wore "horsehair to suit perfection." She was serving in this capacity when she was sent to New York.

She went first to Plymouth, England, where she spent some months as a caretaker woman in the Y. M. C. A. Octagon, administering to the needs of the soldiers and sailors. She did all kinds of manual labor obligingly, and willingly. Continued on Page 4.

Professor Herbert M. Douglass, head of Industrial Education Department, has returned from the West, where he was called by the death of his brother-in-law. Before he returned East, Professor Douglass spent some time at the Dunwoody Institute at Minneapolis, Minn., and the Scut Institute at Monmeech, Wisconsin.

Dunwoody Institute is a vocational school which was established about three years ago by a man named Dunwoody, and was by him heavily endowed. It is now under the direction of Dr. C. A. Prosser, a leading figure in vocational education in the United States. The registration in the institute totals approximately five hundred. Plans are already under way for the construction of new buildings in anticipation of a larger enrollment.

The school gives instruction in machine-shop practice, automotive repair—this is an exceedingly large class, Professor Douglass reported—carpentry, cabinet making, printing, electrical work, sheet metal work, plumbing, commercial photography, and baking. During the war Dunwoody Institute trained seven thousand soldiers and sailors.

Stout Institute is supported entirely by the State of Wisconsin. It is unique in that it does just two things—it trains teachers of home economics and industrial arts. The equipment of this institute includes the Fieldwold Building which houses the Economics and Teachers of Industrial Education Department.

"PEP"

Yes, it's an old, old subject; but, you see, there is no one who has too much "pep," and Economics 4 teaches us that "suggestion is presented in proportion to amount or volume," we venture to add this modest bit, lest to what has already been said.

We hope you will not make the mistake of thinking that we consider State College lacking in "pep." She, as a College, is full of pep — no more forty men or no basketball court or a track of any sort; that will be "on her toes" all the more. There's "pep" — with a little more of the same vim and punch she can force such executives to gain her more room, and she can select enough men that she will be recognized in all sports.

And for the classes, 20 has always set a good pace. This year she can show us how to touch, so to speak, when she is gone. So help her to follow her brilliant example.

So "21's" slogan has always been:

"East of life, full of pep.
Nineteen Twenty-one, you let!"

She is going to show us what "pep" and "spirit" can do for the Liberal Arts. She will need to be "on her toes" all the more, and how a Frosh should be conducted.

22 has been a good class, but this year, as Dr. Painter would say, the odds are against her. She will need to be "on her toes" all the more, and how a Soph should be conducted.

23 is a good class, but this year, as Dr. Painter would say, the odds are against her. She will need to be "on her toes" all the more, and how a Junior should be conducted.

24 has a small majority of the students in its class, and how a Senior should be conducted.

We hope your Sophomore will have an excellent opportunity to show off some of the "pep" this year.

ARE WE WAKING UP?

In last week's "News," an article called "We Are Waking Up" was published. We may be — along certain lines. Take, for instance, the matter of our blanket tax. Of course, we realize the idea of having a blanket tax is a step in the right direction, and the fact that these two years have paid for the new Fine Arts Board; but, is it not true that the way in which the tax has been raised and the way in which it has been spent has been definite in some other directions are absolutely lacking? Let's see. For instance, since the members of the House of Representatives were elected and the plans of the class councilors of Newman have been definitely settled, will there be a new Fine Arts Board, but it is now a week since the second election and no developments have as yet been evident. Nothing can be carried on without some sort of expense, and the expenses of college activities are stated to be of the Board. Nor is a right to any of the amounts that have been raised.

The one branch in which we all see the most marked example of that of studying. Very good, Eddie, but that is taken for granted. We wouldn't have school teachers if we had to give up teaching from being deserted and, the campus from being trumped down. And now, 23, we are hardly acquainted with you, but we feel sure that in spite of your small numbers you will here be after mid-years, and that you will keep the Sophs on the dance floor.

So much for the classes, but it is the individual that we are speaking of. We have been, and how a Soph should be conducted.

22 has been a good class, but this year, as Dr. Painter would say, the odds are against her. She will need to be "on her toes" all the more, and how a Soph should be conducted.

23 is a good class, but this year, as Dr. Painter would say, the odds are against her. She will need to be "on her toes" all the more, and how a Junior should be conducted.

24 has a small majority of the students in its class, and how a Senior should be conducted.

NEWMAN CLUB

Some Seniors have already signed up to have their portraits taken this week. Mrs. Agnes is to have them at the old, old subjects; but, you see, there is no one who has too much "pep," and Economics 4 teaches us that "suggestion is presented in proportion to amount or volume," we venture to add this modest bit, lest to what has already been said.

We hope you will not make the mistake of thinking that we consider State College lacking in "pep." She, as a College, is full of pep — no more forty men or no basketball court or a track of any sort; that will be "on her toes" all the more. There's "pep" — with a little more of the same vim and punch she can force such executives to gain her more room, and she can select enough men that she will be recognized in all sports.

And for the classes, 20 has always set a good pace. This year she can show us how to touch, so to speak, when she is gone. So help her to follow her brilliant example.

The "Constitution" of To-day—Electrically Propelled

The U. S. S. "New Mexico," the first battleship of any nation to be electrically propelled, is one of the most important achievements of the scientific age. She not only develops the maximum power and, with electrical control, has greater flexibility of maneuver, which is a distinct naval advantage, but also gives greater economy. At 10 knots, her normal cruising speed, she will steam on less fuel than the best turbine-driven ship that preceded her.

The electric generating plant, totaling 28,000 horsepower, and the propulsion equipment of the great super-dreadnought were built by the General Electric Company. Their operation has demonstrated the superiority of electric propulsion over old-time methods and a wider application of this principle in the merchant marine is fast making progress.

Six auxiliary General Electric Turbo-Generators of 400 horsepower each, supply power for nearly 500 motors, driving pumps, fans, shop machinery, and kitchen and laundry appliances, etc.

Utilizing electricity to propel ships at sea marks the advancement of another phase of the electrical industry in which the General Electric Company is the pioneer. Of equal importance has been its part in perfecting electric transportation on land, transforming the potential energy of waterfalls for use in electric motors, developing the possibilities of electric lighting and many other similar achievements.

As a result, so general are the applications of electricity to the needs of mankind that scarcely a home or individual today need be without the benefits of General Electric products and service.
Junior Wins Fellowship
Continued from Page 1.
She was then sent to Camp Lee, Va., to receive her appointment and further instructions. Later she was notified to sail for France October 11, with the other candidates.

The purpose of the Society for American Fellowships in French Universities is, first, to perpetuate through a body of university students the friendship that exists between France and the United States; secondly, to develop a better appreciation of the contributions of French Universities to science and learning; and thirdly, to offer, for open competition among the graduates of American colleges and others willing to introduce in the technical fields opportunities for advanced study in the French Universities.

The Society was organized last spring, and it was decided to launch the plan this fall, partly in order to enable the selected candidates to enter upon their studies at the beginning of the forthcoming academic year, partly to meet the wishes of some of the French educational authorities who are cooperating in the plan, even though the time for securing the desired publicity was not adequate. The first awards were made in September, and it is intended that applications shall be made before January 1 of each year and that announcements of the awards be made in the following month.

Tribute to Miss Valentine
Continued from Page 1.
never the less she was ready to help. Occasionally, she had opportunity to visit Cambridge and Paris, where she had so often planned to go, in the days before the war, for her own cultural development.

More recently, Miss Valentine was assigned to work in Paris. While there she received word of her father's death in America. Her eagerness to return was renewed, even in her work with a deeper understanding of the troubles of those about her.

In June of the past year, Miss Valentine was finally released from service. She had made all plans for returning home and expected to leave France very soon, when the automobile accident occurred which cost her her life. While riding with some of her friends in a car driven by Miss Valentine, caus­ ing injuries from which she never recovered.

Miss Valentine had many friends and admirers at State College. Her life was and always will be a source of inspiration to all who knew her. Dr. Richardson's heartfelt tribute to her will be remembered by all who knew her.

KAPPA DELTA
Marjorie Bryant, '20, spent the weekend at her home at Johns­ town, N. Y. Kappa Delta extends congratulations to Jean Hangerford, '20, on her election to Omicron Nu. Marjorie Porter, '21, and Bertha West, '20, were guests at the House over the weekend.

Kappa Nu welcomes as members Clara Lavery, ’20; Anne Ogleby, '20; Mary A. Baxter, '22; Eleanor Hyland, '22; and Marion Newell, '22.
