Apathy Tradition Falls!

It has become something of a tradition at State College News for editors at least one editorial on apathy a year. This year we have a problem, apathy seems to be at all-time low. Few students have shown up to express their thoughts and feelings on various campus issues, whether intellectual or social, academic or extracurricular.

Administration, faculty, and students have called many times and thought about planning facilities and inspiring activities and attributes for the more to the new campus. Fraternities and sororities have tried to evaluate their purposes and achievements. At least two of the Senate meetings were at least to have members of the student body. The students who provided worthwhile contributions to such movements as the tax day march.

The State College News received more letters to the Editor than ever before. Dramatic productions scheduled increased attendance. Students expressed more interest in political and social trends, especially the Vietnam War, the student movement, and the world in the world.
Focus on Faculty

Physics Needs Women

By JOAN HANFORD

Physics is popularly considered a masculine field, but a look at the numbers tells a different story. As estimated by the American Association of University Women, only 15 percent of the nation's 18,000 physics majors are women. The same is true at our university.

Women in physics face a number of challenges, both personal and professional. Some feel that they are not given equal opportunities for advancement or recognition. Others feel that they are not taken seriously as professionals by their male colleagues. Still others feel that they are not taken seriously by their own families or friends.

Despite these challenges, there are many reasons to be optimistic about the future of women in physics. The number of women in physics is growing, and more and more women are entering the field. This is due in part to the efforts of organizations such as the American Association of University Women, which works to increase the number of women in science and engineering fields.

In addition, there are more women in physics today than ever before. This is due in part to the efforts of organizations such as the American Association of University Women, which works to increase the number of women in science and engineering fields.

In conclusion, while there are still many challenges to overcome, there is reason to be optimistic about the future of women in physics. With the continued support of organizations such as the American Association of University Women, we can expect to see more and more women in physics in the years to come.

Need for Food Drives Student Into Action

By PAT JENKINS

Next to the campus store, I'll find the food drive. It's a great way to serve the community and help those in need. I'll be there.

Professor Discusses Segregation of Sexes: Medieval Survivals in the Academic World

By DR. HENRIK WILLET

The medieval university was a segregated environment, with men and women living and working in separate parts of the institution. This segregation continued into the modern era, with many universities maintaining separate faculties for men and women. This segregation still exists today, with many universities maintaining separate faculties for men and women. This segregation still exists today, with many universities maintaining separate faculties for men and women.

The segregation of sex in the medieval university was not just a matter of convenience, but a reflection of the underlying assumptions about the nature of knowledge and the role of women in society. Women were often seen as inferior to men, and their participation in the intellectual life of the university was limited. This segregation continued into the modern era, with many universities maintaining separate faculties for men and women. This segregation still exists today, with many universities maintaining separate faculties for men and women.
