high-capped sleeves let every rippling wave show off. What about this muscle shirt? Save 33% on all cotton polo muscle shirt. What a great buy! The shirt is perfect for any occasion.

SUNY Amendment Debated

by Susan Milgrom

At last Wednesday night's Central Council meeting, SASU's plans to expand by organizing into five sections according to location, operating in the fall this year, were approved by the Board of Trustees of the State University of New York. SASU's plans now await the approval of the New York Senate before the SASU funding increase can be decided.

The filming on the SUNYA campus of the movie "The American Friend," directed by Alan Pakula, ended yesterday with "no major problems," according to location set designer George Jenkins, who also designed the Arabian palace. Filming on the SUNYA campus has raised a number of questions at SUNY campuses across the state. How many dollars are available? Can all SUNYA campuses benefit from the filming? What will happen to SUNYA's students? SUNY's President, Charles Wharton, said that the filming will be a boon to SUNYA. "Our students are learning about the world of business that we are involved in," he said. "We're going to make the most of this opportunity." The filming was started in November and ended in April.

Flanagan emphasized that the "American Friend" was not the only film that SUNYA campus has been involved with. "We have been involved in several films this year," he said. "This is not a one-time event," Flanagan later added."The point of the amendment is to fight hard in a conference to get what we need," Flanagan said. "The State University system is subsidized now...all we have to do is organize and say, 'We should use our money for lobbying efforts, $8,000,000 of that figure is crucial to have an advocate for SUNYA.'"

The amendment is crucial to SUNYA's future. "We're going to raise your tuition," Flanagan said. "We need your help to fight for what we need." The amendment was debated and approved by the Board of Trustees of the State University of New York. SASU's plans now await the approval of the New York Senate before the SASU funding increase can be decided.

SASU Funding Increase to be Decided

by Beth Sieber

SASU's plans to expand by organizing into five sections according to location, operating in the fall this year, were approved by the Board of Trustees of the State University of New York. SASU's plans now await the approval of the New York Senate before the SASU funding increase can be decided.

Richardson Indicted

The U.S. House of Representatives on Thursday approved a bill to remove U.S. Rep. Henry B. Richardson, D-Mich., from the committee that awards presidential pardons. Richardson, who had been under investigation for two years for his involvement in the Iran-Contra affair, is being charged with jury tampering and obstruction of justice. The bill was passed by a vote of 318-0, and Richardson is expected to be indicted on charges related to the Iran-Contra affair later this week.

Man Found in Atlanta

ATLANTA, Ga. (AP) A man who was found dead in a car in a Atlanta parking garage was identified as a 30-year-old man from the city. The man, who was found in a car in the garage at 10 p.m. Wednesday, was identified as a 30-year-old man from Atlanta. The man was found by a security guard, who entered the garage to check on a car that had been left there for several days. The guard found the man lying on the car's driver's seat, and called police, who arrived on the scene and pronounced the man dead. The cause of death was not immediately known.

New York-Times Co. Owners Offer to Fund Lighting

New York, N.Y. (AP) The New York-Times Co. owners have offered to fund a lighting project on the Times Square area. The project, which is expected to cost $1 million, would involve the installation of new lighting fixtures on the Times Square area, including the Times Square Plaza and the Times Square Center. The project is expected to be completed by the end of the year.

Federal Tuition Tax Credits May Not Manifest

Washington, D.C. (AP) Federal tuition tax credits may not manifest as promised, according to a report released Thursday by the National Council of State Governments. The report, which was released by the council on Thursday, found that the federal government has not yet provided enough funding to make the tax credits available to students. The report also found that the states have not yet provided enough funding to make the tax credits available to students. The report called for increased federal funding to make the tax credits available to students.

Reagan to Return to Work

WASHINGTON, D.C. (AP) President Reagan is expected to return to work on Monday, according to a White House official. Reagan, who has been under treatment for a minor illness, was hospitalized on Friday and has been receiving treatment for the illness. The White House official said that Reagan is expected to return to work on Monday, and that he will continue to receive treatment for the illness.

**Colleges Debate Creation, Evolution Theories**

At the center of the controversy is the question of how the universe and life on earth originated. The debate is over whether evolution is real or not. The creationists believe that God created the world approximately 6,000 years ago by a supernatural event. They argue that evolutionists are trying to explain away the supernatural events and replace them with natural processes.

On the other hand, evolutionists believe that the universe and life on earth evolved over billions of years through natural processes such as mutation, selection, and adaptation. They argue that creationism is not a scientific theory and is not based on evidence from the natural sciences.

The debate is not just between creationists and evolutionists, but also between religious groups and scientific organizations. The National Science Teachers Association, for example, has taken a stance against the teaching of creationism in public schools. They argue that creationism is not a scientific theory and is not supported by the evidence from the natural sciences.

The debate has been going on for decades, and there is no clear winner. Both sides have their own set of evidence, and the debate is likely to continue for many years to come.
To All The People Who Helped Make Indian Quad Board A Success:

We've done a great job all these months and something tells me this last one will be even better. Thanks for understanding. The time, work and Quad wouldn't be so terrific if it wasn't for all of you. Keep smiling and good luck with your last projects.

Thanks Again,
Debbie, Alyson, Howie and Jeff
### Housing Gripe

To the Editor:

I am writing this letter with no hope that it will be the answer to a world problem. In fact, I am writing this with no hope that it will be read by anyone other than myself. But in the hopes that it may be useful to someone in the future, I am writing this letter.

In a world where the cost of living is constantly rising, it is becoming increasingly difficult to find a safe, affordable place to live. I know many people who have been forced to move to cheaper areas, only to find that they are still struggling to make ends meet.

We need a system that works for everyone. A system that is fair and just, and that provides a way for people to live in dignity. This is something that we can all work towards, and I believe that we can make a difference if we work together.

Sincerely,

Joe Benjamin

### Time to Clean Up

To the Editor:

I am writing this letter to bring attention to the poor condition of the athletic fields on campus. I have seen many instances where students have been injured due to the poor condition of the fields.

It is concerning to see that the university has chosen to allocate money towards upgrading the equipment in the gym, while neglecting to maintain the outside areas. This is a disservice to the students who use these facilities.

I urge the university to consider the safety and well-being of the students who use these fields, and to invest in their maintenance.

Sincerely,

Joe Wolf

### Beating Violence

To the Editor:

I am writing this letter to bring attention to the issue of violence on campus. I have seen many instances where students have been physically assaulted, and it is becoming increasingly concerning.

I believe that we need to take action to address this issue. This includes providing training for students and staff on how to handle situations of potential violence, and ensuring that there are adequate resources available to support those who have been affected.

I urge the university to take this issue seriously and to work towards creating a safer environment for all students.

Sincerely,

Joe Smith

David Brooks

The Fruit Tree

Laura Friedman

Me, Myself, And I

There was a woman who had many sons in the village of Mariah. She was very kind and always helped the less fortunate. The woman was not only physically strong but also mentally sharp. She was the leader of the village and was respected by all. Her sons were all very intelligent and had a great passion for learning. They would often gather around her and listen to the stories she would tell. One of her sons, however, was a bit different. He was always quiet and did not speak much. The woman noticed this and would often try to encourage him to speak up. However, he always remained silent.

Charles Mingus race through my mind. I keep thinking about the words he spoke to me once. "You must live your life, not just breathe it. You must live it with passion, with intensity. You must live it with meaning. You must live it with love." These words have stuck with me ever since. I have tried to live my life according to those words. I have tried to make each moment count.

We can see inlentlon, oul ol which action should occur. To have run Ihe race is no more significant in the eyes of many than it is for us. We should not be complacent. We should not be satisfied. We should always be striving for improvement. We should always be striving to do better.

The players are in motion. Someone or something is going to catch them. They are not going to catch me. I am going to catch them. I am going to be the one to make it. I am going to be the one to win. I am going to be the one to be remembered.

David and I are not the only ones who are struggling in this world. There are many others who are also struggling. They are not alone. We are not alone. We are part of a larger group. We are part of a larger team. We are part of a larger society. We are not isolated. We are not alone.

We can see inlentlon, oul ol which action should occur. To have run Ihe race is no more significant in the eyes of many than it is for us. We should not be complacent. We should not be satisfied. We should always be striving for improvement. We should always be striving to do better.

The players are in motion. Someone or something is going to catch them. They are not going to catch me. I am going to catch them. I am going to be the one to make it. I am going to be the one to win. I am going to be the one to be remembered.
Take Two Needles And Call Me In The Morning

The treatment involves the use of needles, which have been used for centuries in China and other East Asian countries. The Chinese practice of acupuncture is based on the belief that energy flows through the body along specific pathways called meridians. Needles are inserted into specific points on the body to balance this energy flow and treat various conditions.

Methods of Treatment

The insertion of needles is a major part of the treatment procedure. Through the years, the method of needling has evolved, and today, needles are inserted in a variety of ways.

1. Direct Needling: This is the most common method, where the needle is inserted into the skin at a specific angle and depth. The point is usually on the surface of the skin, and the needle is inserted until it reaches the meridian point.

2. Indirect Needling: In this method, the needle is inserted into the skin at a shallow angle, and the tip of the needle is inserted into the meridian point. The needle is then moved back and forth to stimulate the meridian point.

3. Perpendicular Needling: In this method, the needle is inserted perpendicularly into the body at a specific angle and depth.

4. Twisting Needling: The needle is inserted into the skin at a specific angle and depth, and then twisted to stimulate the meridian point.

5. Electro-acupuncture: In this method, electrical current is applied to the needle to stimulate the meridian point.

Finding an Acupuncturist

Finding an acupuncturist can be challenging, as not all physicians are trained in this practice. However, there are some resources available to help you find an acupuncturist.

1. Ask for Referrals: Ask your primary care physician or a trusted friend or family member for a referral to an acupuncturist.

2. Check for Certification: Make sure the acupuncturist is certified by a recognized organization.

3. Look for Experience: Look for an acupuncturist who has experience in treating your specific condition.

4. Consider Cost: Acupuncture can be expensive, so make sure you can afford the cost.

5. Ask for a Consultation: Many acupuncturists offer a free consultation to help you determine if acupuncture is right for you.

The use of acupuncture is growing in popularity, and it is becoming increasingly recognized as a valid form of healthcare. However, it is important to remember that acupuncture is not a cure-all and should be used in conjunction with other forms of treatment. Always consult with your healthcare provider before using acupuncture or any other form of alternative medicine.
The Right Direction

‘Victims Of Duty’-A Labor of Love

Lisa Avery Michael,

Lisa's performance as Margaret in the play 'The Omen' was a labor of love. The performer, known for her work in television and film, chose to direct 'Victims Of Duty' as a natural extension of her work. The show was well-received by both critics and audiences, and Michael received positive feedback for her direction and performance.

City run of the mime play.

Lisa Avery Michael, a well-known mime artist, directed the City run of a mime play. The production was well-received, with Michael's unique approach to mime being praised for its creativity and innovation.

Stop the Tragedies

Nuclear Burdens:
The Price of Waste

Thursdays 1:00

Franklin Network Power Company (FNPC) is planning to build a new nuclear power plant in New York. It has filed for a license to build the plant with the New York State Board of Regents. The plant would be located on the shores of Onondaga Lake, just south of Canandaigua, New York. The plant would be a 1,000-MW unit, and it would generate electricity by converting heat from the decay of uranium into steam. The steam would then be used to drive turbines, which would generate electricity.

The plant would be built on a 100-acre site and would house two 500-MW units. The project is expected to cost $1.5 billion, and FNPC has already raised $500 million in financing. The remaining $1 billion will be raised through a combination of loans and equity capital.

The plant would be built in two phases. Phase I would consist of a single 500-MW unit, and Phase II would consist of a second unit. The first unit is expected to be operational by 1990, and the second unit is expected to be operational by 1992.

The plant would be used to generate electricity for the New York Power Authority (NYPA), which is a state-owned utility that provides electricity to the New York City area. The plant would be used to meet the demand for electricity in the region, and it would also provide a source of revenue for FNPC.

The plant would be constructed using the latest technology, and it would be designed to meet all safety standards. The design of the plant would include a number of features that would make it relatively safe, including an automatic shutdown system that would shut down the plant if any safety equipment failed, and a backup power system that would provide emergency power in the event of a loss of electrical power.

The plant would be located on a site that is known to be environmentally sensitive, and it would be built using the latest environmental techniques. The site is adjacent to a lake, and the lake would be protected from any potential pollution by a barrier of concrete and steel. The site would also be landscaped to provide a natural setting for the plant.

The plant would be a major economic development for the region, and it would create hundreds of jobs. The plant would be constructed using American-made equipment, and it would provide a source of revenue for the local economy. The plant would also provide a source of revenue for FNPC, which would be able to use the plant to generate additional revenue.

The plant would be a major achievement for FNPC, and it would mark a significant step forward in the company's efforts to meet the increasing demand for electricity in the region. The plant would be a major step forward in the company's efforts to meet the increasing demand for electricity in the region. The plant would be a major achievement for FNPC, and it would mark a significant step forward in the company's efforts to meet the increasing demand for electricity in the region.
