

Back-up Adobe Premiere Projects Consolidate & copy projects to a new location

Open the project. Select **File > Project Manager**. Save the project *if* prompted to save.

Select the sequences to consolidate and copy. Typically, there is only one sequence.

REVIEW OPTIONS: All raw footage imported into Premiere but not used may not be consolidated and copied to a new location if not selected.

You may want to unselect **Exclude Unused Clips**

Choose the destination path. The destination path tells Project Manager where to save your project. Click **Browse...** to navigate to a location other than the default.

The default [example above] is where the project exists now.

Review **Disk Space Available** on the new location. Press **Calculate** to obtain an estimate of the size of the project. Confirm that the project will fit on the new location. Then click **OK**. Once the progress bar has completed it will disappear and your project is copied.
