Convert MTS files to MP4 with Adobe Media Encoder

Open Adobe Media Encoder. Drag MTS files into the Queue Browser; you may drag multiples files.

Set format to **H.264** & preset to **Match Source-High bitrate**. The Output File is where you choose to store the MP4 file (pay attention to this location! You will need to find the MP4 file later).

Click the **GREEN ARROW** to begin converting. The file will appear as it is converting; the final MP4 file will be located where you set the Output File.
