Netters Win Two More; Record Now At 13-3

By Sally Emmaus

Many fans might say after watching two matches they wish they could have seen more, but the Netters barely lost their 13-3 victory over the University of Vermont in the last match of the season. The Netters' next scheduled match is against St. John's on October 6.

The match began with a highly anticipated game between the Netters and Brown. The Netters emerged victorious, making it a 2-1 victory for them. The following day, the Netters faced off against Vermont, resulting in a 3-2 win.

The Netters' performance was impressive throughout the season, with several players contributing to the team's success. Mary Bell, in particular, stood out with her consistent performance in the backcourt.

Overall, the Netters' season was a success, with a record of 13-3. They will continue to train and prepare for their upcoming match against St. John's, aiming to maintain their winning streak.
Dear Reader:

Once again we have tried to provide you with a wide selection of review choices. In three of our columns, Today, Print-Talk, and Out Smarting the Jones the choice of books runs the complete gamut of the different kinds of philosophical approaches applicable to writing.

Today offers the most serious list of writing. The Eastern European series is the most profound writing in the insert. Alan Watts’ book reflects our first attempt to delve into the philosophical. As Watts has been the man most responsible for introducing Eastern thought to the West we felt it important to mention this work. It is also the author’s last work before his death in 1973.

Print-Talk this month offers two unique books, both of which represent the most contemporary pieces of fiction that we could find and still consider them avant-garde without being experimental.

And, as always there is Print-Talk, offering the best of the commercial, or popular best sellers, both in a fiction and nonfiction category. This month there is The Hills Report. Reprinted by Dell this book appears to be the runaway best seller in the nonfiction category. Gary Trudeau of Doonesbury fame, has written another book, his second in just about six months. A couple of books we couldn’t include and worth mentioning are Peter Benchley’s The Deep to be released in paper this month and Avon’s planned release in paper of Saul Bellow’s To Jerusalem and Back in July.

We would like to wish you happy reading and look forward to returning to you in the fall.

Sincerely yours,
Michael Morgan

LITTLE AMERICA is more like a script than a novel. It is a script of the last ten years in this country. Rob Swigart has picked up on the T.V. manner and created a piece of fiction suitable for those people not embarrassed to admit that they enjoy a good sitcom.

In that sense LITTLE AMERICA is very contemporary. Not just for the fact that it is the last ten years in print, but technically the book has been created to meet the needs and tastes of the T.V. generation. The book is composed of short vignettes, two, three or four page doses of descriptions that can be absorbed, the book discarded and then picked up again, so if a breathing space had been intentionally inserted to let the mind wander, without the day's activities, and then return to the action, the station-break completed.

LITTLE AMERICA is about frustration. But Swigart is not cynical. His story is description. And filled with irony. Mr. Swigart's protagonist is looking for a place to relax and enjoy his life without outside interference and still be in the middle of all things.

Griffith Hotchkiss will find this place after he has sorted out all the experiences that every young man must go through in the product of white upper middle class American, college, summer jobs, the pride of a mother who truly cares and a father with only time enough to care between business lunches and choosing young females. The war in Vietnam attached to the Russian, Israel, corruption. The desecration with marriage. Blackmail. Sexual fantasy. Swigart has chosen to spoof everything. Nothing is left unsatirized. Even our sacred myth Leaguer traditions have been considered a horrid.

Rob Swigart's LITTLE AMERICA is an interesting piece of writing. Something out of the ordinary, and something very entertaining. If you choose to read it, read it with open eyes.

Houghton Mifflin $3.95

These days, I am highly suspicious of any new book which claims in its cover to resemble Tolkien's LORD OF THE RINGS. I think of it as a cheap trick which publishers use to try to sell more books by creating their customers, and so on it. I turn also suspicions of any copying anything. Also, I think to myself, they're trying to cash in on the WHOLE鲲 sinking success. But when I finally convinced myself to read Neil Hasck's GREYFAX GRIMWALD, I found myself pleasantly surprised.

It's no that Hasck is a somewhat derivative of Tolkien. The character of GREYFAX GRIMWALD, wizard and member of the CIRCLE OF LIGHT, a brotherhood of wizards, bears a familial resemblance to that of Gandalf the Grey. Well, what of that? What does the hero of an old, established tradition figure in fantasy tales, with a basis reaching back to Merlin and Boromir in the Arthurian cycle? Hackett, like Tolkien, relays a great story of apocalyptic conflict between good and evil, not so much concentrating on the main actors in the conflict, but in telling about Dweor, Blak and Other, three folk with a large part to play, much like Frodo and his companions.

Again, having pointed out the resemblance, I will dismiss it. This, too, is an old tradition with fantasy stereotypes. What is important about any story this kind is not the elements which go to make it up, elements which come from a common stock of folklore and fairy-tale, but the use to which the storyteller puts these elements.

Hackett puts these elements to very good use. I found myself drawn into the story about seven pages in, when Other enters the scene, and remained cheerfully engrossed for some hours. Hackett is a simpler writer than Tolkien, although GREYFAX GRIMWALD is adult fantasy, it would be comprehensible to a younger audience as well.

GREYFAX GRIMWALD is the first of four parts. I will be awaiting the remaining three with some eagerness, and I suggest you do the same. —Kath Schaeffer

In 1972 Tom Robbins' first novel, ANOTHER ROADSIDE ATTRACTION, appeared in paperback and quickly became a counter-culture phenomenon, becoming for the laid-back, cypress American youth of the Seventies what ONE FLEW OVER THE CUCKOO'S NEST AND CATCH 22 had been for their more proper contemporaries of extraordinary critical and popular acclaim. As an inexpensive paperback edition has just appeared, and promises early.

EVEN COWGIRLS GET THE BLUES is the story of a young woman, Susan Hackshaw, and her gifted and beautiful Cowgirls GET THE BLUES is the story of a young woman, Susan Hackshaw, and her gifted and beautiful

Bantam $2.25

1977:
The most colorful year in TIME'S history.

What a time to subscribe at low student rates!

This year, TIME adds a new dimension to your enjoyment of the news. Because this year, TIME is adding more color pages than ever before.

More than any other newsmagazine.

TIME is lighting up all its sections—from Science to Show Business—with compelling color photographs of important world events and personalities...fascinating places and changing fashions...new movies and plays...an art gallery...archaeological finds—the entire spectrum of weekly newscovers.

TIME is exciting, informative, and at a time when you need something colorful, newsworthy and interesting to read. Which is why more and more people subscribe to TIME each year, including a record number of college students.

What a time to subscribe! For only 25¢ an issue—half the regular subscription—you'll get more color than you'll find in any other newsmagazine. That's one special college rate—and you can order anywhere from 25¢ to 104 issues at the 25¢ a copy rate—all filled with outstanding color photographs and equally colorful writing. To Order The World's Most Colorful Newsmagazine, see the TIME subscription card included in this paper.

TIME. It has news for you.
Outsmarting the Jones

**Born Again**

Charles Colson

**$2.25**

Charles Colson's book, **Born Again**, provides an insight into the current American phenomenon of "born again" Christianity. Colson, a prominent public figure in the modern religious movement, has written a book that may have missed the point. Before his conversion, Colson was known as "the master of the so-called 'burning desire'" and afterwards he served Christ in the same way. The book is a call to the conversion of a Christian politician. The reader will understand the subtleties of the Christian faith and its impact on society.

**The Space Vampires**

Colin Wilson, Pocket Books, $1.75

This book is not to be missed. It is a fantastic work of science fiction and is a must-read for all fans of the genre. The story is set in a future world where space travel is common. The book is well written and has a great plot. It is a must-read for all fans of science fiction.

**Astra and Flandrix**

Seamus Cullen, Pantheon Books, $3.95

Seamus Cullen's Astra and Flandrix is an interesting book and could be considered entertaining those who enjoy fantasy settings.

**Science Fiction of the 30's**

Damon Knight, ed., Avon, $4.95

This book is an interesting collection of science fiction stories from the 1930s. The stories are mostly written by authors who later became famous. The book is well written and is a must-read for all fans of science fiction.

**Heavy Metal**

April, 1977, $1.50

This book is a must-read for all fans of heavy metal music. It is a collection of articles and interviews with some of the biggest names in the genre. The book is well written and is a must-read for all fans of heavy metal.

**THE JONES can't. An Especially Tricky People**

G.B. Trudeau

$1.95

**HE WALKS THROUGH EUROPE**

Raymond Chandler Speaking

$0.95

**Wolves in Las Vegas**

by John Hillaby

$1.95

**Dogs**

by Henry Morgan and George Booth

$1.95

This book is a must-read for all fans of dogs. It is a collection of stories and anecdotes about dogs. The book is well written and is a must-read for all dog lovers.

**Outsmarting the Jones**

**The Space Vampires**

**Astra and Flandrix**

**Science Fiction of the 30's**

**Heavy Metal**

**THE JONES can't. An Especially Tricky People**

**HE WALKS THROUGH EUROPE**

**Wolves in Las Vegas**

**Dogs**
For the first time in this country, a fantasy magazine combining all the chilling, pulsating elements of your favorite horror stories and the best and sexiest sci-fi movies you've ever seen! The most brilliant artists and writers of fantasy in Europe and America have made Metal Hurlant France's most talked about new magazine, and now the publishers of the National Lampoon bring Heavy Metal to North America, in English, with added fiction and art. Heavy Metal is savage, sensuous, incredible. Nothing like it has ever been produced in this country. For adults only.

Vincent O'Leary:
Playing The Field For SUNYA

Optimism In The
New SA Administration
Inside

O'Leary: Man In the Hot Seat

by Phil Miller

When President Emmett Fieldes announced his intention to leave SUNYA and take over at Vanderbilt University in Tennessee, the question of the direction of the university that he had left as a subject ripe for speculation. Fieldes' environmental leadership had left a virtual seat in the presidential position. On August 1, an acting president, Vincent O'Leary, will occupy that seat.

O'Leary left the School of Criminal Justice, where he has served since 1986, O'Leary is still getting accustomed to all the aspects of running the university. "At this point, I'm getting involved in a lot of the politics of the university. It is a major school, and there are a lot of things going on here," he remarked. Emernick, who described O'Leary as "the perfect choice" for SUNYA, has been a vocal supporter of O'Leary's appointment. His statement reflects a belief that O'Leary is well-prepared for the university's needs. "O'Leary's experience, his knowledge and his vision make him the best choice," Emernick said. "I think he understands the complex issues at SUNYA and is committed to addressing them.

Although in the short term several appointments have had to be made in anticipation of specific positions, O'Leary mentions several pressing matters, such as the proposed building takeover by COTA, distribution requirements ("In general, I will support the next to develop an effective, well-designed distribution program on the under-graduate level"), improving the advising process, and ensuring support for graduate and faculty development. O'Leary also places major importance in the relationship between the university and the "external world." He "think that there is a correlation between how much we put together as a community and the external world. Bitterness about and gaining support."

Silver Balls And Golden Flippers

by Edie Emerson

On Thursday, June 30, four SUNYA students played a competitive nine-hole golf course in a nine-hole tournament. They were the only team to successfully complete a nine-hole round on the course. Marie Moncel, Drew Ehrlich, Jesse Ross and George Burnett entered to bang out a total of 21,482 points on the Top Score machine at the Campus Center Dining Room. The old record, according to the Campus Book of World Records, is 10,683 points. The team did it in one game.

It wasn't an idea that any of the four had planned ahead of time. There had been no long practice sessions, no discussion over the rules. They simply went to the Campus Center for a few games of pinball, and that's how it all began.

Moncel, a senior, said his quarter into the Top Score machine at low noon and began strategizing and planning his moves. He kept the score up for two hours and 8.4 million points before he began playing the flipper on the remaining three to keep the game alive.

"I was so happy with the score," Moncel said. "I just wouldn't give up, no matter who put their fingers on the flipper."

However, as the game grew longer, they began to tire, and, as with any endurance, errors started to occur more frequently. Finally, five hours and 40 minutes after the game began, the silver ball skipped past the flipper and never returned. It was seen, but they did not see the record. They had used the last of an estimated 300 free balls.

Surprisingly, they weren't upset when the game ended. They were just getting tired and very hungry," said Ehrlich, who has been playing pinball since his fifth grade. "Around 7:30 or 8:00, we asked them if we could make some macaroni and cheese and sit down to eat. We got the food, laid it out, and they got very hungry in the process of doing it.

Moncell, the man who started it all, was thrilled with the experience. "It was a great place experience but I have to give most of the credit to Ross, Ehrlich and Burnett," he said. "I may have started it all, but they did most of the work.

Implementing Operation Bootstrap

To the Editor:

As representatives of a variety of Columbia Communities along the Rainbow Bus route, we are writing to express our concern over the high loss of power caused by a vertical power pole located near our bus stop.

We believe that the action taken by Columbia Police Department enforcement of a environmental Act for another year requires urgent action by the powers that be in which we live. Not only do we lose in the sonic beauty and the ability of the township to sustain healthy life, but we lose in the power of our community.

We believe that the age of new technology as already stated by Mr. Jones could lead to a new age of development. A one-stop service for all the needs of a person is the future, in which we live. Not only do we lose in the sonic beauty and the ability of the township to sustain healthy life, but we lose in the power of our community.

We call upon the Governor, and upon the people of this state to act against themselves and take immediate action to implement the proposal put forward in “Operation Bootstrap.” This study, conducted by Daniel Halsey, chairman of the 1979 Legislative Committee on Energy Policy, offers common sense solutions to your problem:

- Open Sat-Sun 9:30-12:30, Sun 12-11, Mon - Thu 4-11
- Ask for MIDDLE WHEEL PIEZ.
- OPEN & HONEST
- 605-5003

SA’s biggest problem? Not enough grassroots support, and the faculty and administration don’t take it seriously.

by Jill Bieder

Dave Gold, newly elected Student Association president, is working to change the opinions of new officials and increase the organization’s visibility in the university community.

One of the things we’re doing is increasing the number of students. The reason for this is that students need to have a voice in the organization. Students don’t have a voice and don’t have a chance to be heard. We’re doing this by increasing the number of students who vote and the visibility of the Student Association.

If we have more students, we can have more activities and more visibility. We’re working on increasing the number of students who vote, and we’re working on increasing the visibility of the Student Association.

We’re also working on increasing the visibility of the Student Association. We’re doing this by increasing the number of students who vote and the visibility of the Student Association.

We’re working on increasing the visibility of the Student Association. We’re doing this by increasing the number of students who vote and the visibility of the Student Association.

We’re working on increasing the visibility of the Student Association. We’re doing this by increasing the number of students who vote and the visibility of the Student Association.

We’re working on increasing the visibility of the Student Association. We’re doing this by increasing the number of students who vote and the visibility of the Student Association.

---

Student Association President Dave Gold: "I’m striving for is to make students more powerful.

I believe that by increasing the number of students who vote and the visibility of the Student Association, we can make a difference on campus. Students need to have a voice in the decision-making process, and we can help to make that happen. By increasing the number of students who vote, we can make sure that their voices are heard.

I’m looking forward to working with everyone to make the Student Association a more powerful force on campus. I’m excited to see what we can accomplish together."
Roast beef sandwiches, filthy laundry, Snoopo giving a finger, piles of records, Beatles weekends, sidewalk talent shows...

by Richard Montreal

The swarming of soon-to-be-freshmen about the university has tapered off. For many of them, this is their first extended visit to RIT's campus and that has made me think about my first visit here. It was not during orientation.

My brother went to school here from 1971-75. I visited him in the first week of May during his sophomore year.

Retrospectives are by nature bittersweet; the black areas always fade toward a shade of bearable gray. But this memory was unshakable before it was a memory. Throughout my entire stay, I never once dwelled upon the overabundance of concrete, the endless array of pillars, or the symmetrical line-up of trees upon trees upon tree. I noticed it all, but it never occurred to me that someone might be annoyed by any of it. I was fifteen.

My brother picked me up at the Greyhound station at noon. "Hey Jude," the best song ever released, was playing on the radio as I got into the car. The next two songs were by the same group, "It's a Beatles weekend on this station." Bill explained.

As soon as we got to State Quad, he had to leave for lunch. He and two of his friends brought back a couple of sandwiches for me. They were roast beef sandwiches and tasted pretty good.

Bill was slightly concerned that there wouldn't be enough accommodations for baby brother, it seemed, and made a conscious effort to spend as much time as he could with me. We went bowling, played a game of softball, and walked around the second floor of the campus center, where some sort of fair was going on. I bought a computer printmaking Snoopo giving the Red Baron the finger which was funny to him.

Nowhere in the course of our travels did Bill say anything that the three of us were passing. He didn't particularly enjoy his time here, but his comments remained impartial. And there was no way he was thinking about the fact that I might go to school here one day. He wasn't even thinking that I might one day go to school.

It was gloomy out. The overexposed chances of rain which seems to linger over Albany on even the sunniest days was the only finish on the afternoon. It was dinnertime, and rather than attempt to sneak me into the cafeteria, Bill told me to prepare for more sandwiches.

Again we went. Through his windows in the suite. George and Mark both had an amazing capacity to never once leave away of the flickering light of the television and that two of them had content to see one could form a higher pile of laundry on the floor. When they ran out of clothes, they would merely turn the pile upside down. Someone dirty stuff became clean. Clean compared to the soiled clothes that previously peaked the pile.

Nothing but records. Everywhere I looked — more records and more records. Any record I ever want to find, for sure, I thought, I listened to "Lucy in the Sky with Diamonds" by the Flamingos. It was enough to make me in love.

That night, we tried to go to "A Clockwork Orange" at the Pine Cobble. It was too late, but he had prevented me from getting it. Instead we went to the International House of Pancakes and that 2:00 a.m. "Retrospective." And then I put on a record I had heard of called "A Good Feeling Knows." By Patti Labelle. I had never heard of it. I didn't even know it. I was very young then, I'd never heard of it. Bill was my favorite voice.

Mine was a broad, kaleidoscopic view, unknowingly distorted by naive blindness.

Bill's RA stopped in and was introduced to me. Within two minutes, he commented on the fact that most young siblings who visit their brothers and sisters are more jeer and timid and quiet, as compared to me, who, was bold, braveness, burning on rebellious. Somewhere, he said it.

Most was past midnight, and about six of us found ourselves standing between Anthony and Whitman, lying down outside. This was my first experience in college hanging out, and at first it didn't seem much different than high school hanging out. My brother tried to remember the last time while hanging out.

One girl stopped, gave a bearded grin, and performed a five second soft shoe routine. We all applauded wildly. She curtseyed, and walked on.

Someone else strode by, and was requested to play "What's Your Talent?" He said he had sung, so we gave him an hour to compose a song and the results were fantastic. He played a song, and we laughed until the next victim unknowingly crossed the stage.

"Name your talent!" we demanded. "You fail!"

"Name your talent! Don't you do anything!"

That's the way I've always heard it should be.

Daino's Ring Play Purchases
"Uh, no!" "HAAAA!" and then I filled the arena.

He walked away, thoroughly embarrassed. We covered the record and expected as the night wore on, often sitting for whisking honey, twirling your eyes and touching your nose with your index finger or hopping. The applause was enthusiastic nonetheless, for we were very easily pleased. In short, that the atmosphere of walking around here is of hanging before us and performing.

One of Bill's friends passed us about four times, and simply made a gesture as if he was finishing a wonderful song and starting the audience claps. We applauded accordingly, perfectly content with that.

We started singing as it became apparent that no Cola acts would be coming our way. For it was 8:00. Kids started shouting requests from the dorms, and some threw pennies when we sang one of their songs. Finally, a heavily veiled asked if we could shut up for about seven hours.

Ritchie answered, "we still have more requests," as he smashed to pick up some pennies. "I'll tell you what though. For a dime we'll stop singing."

"About a nickel or three pennies."

"The money came rolling down. Ritchie collected it from the concrete, and our choir dissolved.

Five years later Charlie's married, has a baby, and is living in Texas. Ritchie and Bill own an art print and frame store in Urbana. Bill, George, after amusing about his When's wife jin on many semesters I left for work in his store. Bill's little brother goes to Albany.

My first visit certainly wasn't the determining factor in setting me course toward a school whose founder is named Rocky. But don't commodity is cement. But this day I maybe had some influence on my decision.

I didn't know then that rock and mood conditions are hard to find on the guide, and cost a dollar and change in the Campus Center. Or that Beetle weekends come only once a year. Or that the abundance of records which had impressed me so much, are often played at unbearable levels while you're trying to study for a final. Or that hanging out rarely turns into a talent show and often turns into a rather unceremonious means of passing time while smoking.

There is an incident. "here!" to blame it on. The last time I found myself standing in front of Fulton with a few friends, I could have said with a Liverpudian accent, "he says just a few moments ago." I saw him, perhaps 50 feet away, and touching the tip of his nose. Instead, I said, "let's go to the hall." He had a hundred times before.

When we pass an incoming freshman contentedly smiling at his new surroundings, some of us look down conversely, mourning our other naivety. But inside, we envy him.

We wish to hell that we could be there again.

**The Amplifier: Mixing Water and Electricity**

by Rich Peterson, NYC stereo engineer.

If a tremendous challenge is to develop a new type of amplifier, one that possesses the characteristics of a solid-state device but also has the potential for high-linearity and low distortion, then the Super HiFi Specials this week offers a wide range of options. These amplifiers can be used in a variety of applications, from stereo systems to hi-fi systems. They are designed to provide high-quality sound reproduction, with a broad frequency response and low noise levels. If you are looking for a new amplifier to enhance your stereo system, these Super HiFi Specials offer an excellent opportunity to find one that meets your needs and provides excellent sound quality.
Human Rights of South American Indians

Gemeinde in Paraguay

Edited by Richard Arnes
Temple University Press
Philadelphia 1979

By O. Pamela Bethea
Jimenez Carter’s proposal of human rights is calculated to reinforce the moral case made by Jeffersonian diplomacy. That defense has been in dispute since it was a result of the revolution aimed at bringing humanitarian and theocratic ideals to Latin America. The scope of the human rights discourse has been to advance an all-encompassing notion based on the premise that the nation-state community has become the whipping boy. For human rights, observation and entertainment are at least as fundamental an attack on human rights as the violation of political freedom.

Gemeinde in Paraguay, a collection of essays, chronicles passionately such an attack on human rights. In Paraguay, a land-locked South American nation, an elite, people, the Arike Indians, are the victims of a deliberate policy of extermination implemented by the Paraguayan dictator Alfredo Stroessner. (A more recent threat to the mass media is the invasion of television, O. Pamela Bethea, an assistant professor of public relations policies has almost been turned into a communicative act, something more generally in the coverage, "You have to be afraid," according to Monest, has been incorporated into the Aryak, "There are many, many ways to die: medical attention in remote, the performance of religious rites and social practices in Paraguay: the tribe’s chiefs are tortured and women raped. To the Arike’s "saviors" with the consequence (or translation) into the mode of life of the whites, it is not meaningfully distinguishable from death.

In Paraguay the weight of "civilization" has encountered its 200-year-old enemy—humankind. Law and logic have always been the Arike’s mainstays. The result is that the Arike’s form has been preserved, in a way as much as a symbol against the final Arike sacrificial.

Though Gemeinde in Paraguay does not make a systematic study of the relation between the ever-increasing utilization of forest resources and the ever-increasing destruction of the Arike, Stroessner does note the importance of such a factor as he has described his relations with the government behind Gemeinde. Monest points out that 54 percent of the land on which the Arike people is located by forest industries.

UC Approves DNA Research

The University has endorsed the request that research on the use of DNA work approved by the University for the work of the research institute. The research institute will be structured to send a delegation to the University for the purposes of implementing the recommendations.

President Gless, who recommended the University to endorse the research institute, stated that, "the executive research board and the advisory committee for scientific advancement and the safety regulations which have been considered by the State Legislature." He continued, "the University has a high responsibility to protect public schools and we see the potential damage that could occur to students if we do not make the improvements that are necessary.

Vacant Campus Positions Available

Information about the following campus job opportunities is available from the Personnel Office, 7-2026; PTT-31, Assistant or Associate Vice President for Academic Affairs, PTT-32, Dean of Undergraduate Studies, PTT-37, Academic Advisor, University College; PTT-22, Assistant Director, School of Education; PTT-34, Associate or Full Professor, Paraguay, etc.

CAMPUS BRIEFS

Lena Pupin, director of the Academy of Fine Arts and the Executive Council of the National Academy of Fine Arts, Glenville, Maryland, will retain a three-year position on the Campus Community Council Committee. She is a member of the Executive Staff, Committee. The annual academic scholarship is provided by the New York State Board of Education, CC 30. The program will be followed by Dr. Pupin in recent years.

Kemneth Buttenheim, of Salina, 62, headed the Bunting Foundation, Unity to the University Council for a year.

University Council, May 1977

Human Rights of South American Indians

The University has endorsed the request that research on the use of DNA work approved by the University for the work of the research institute. The research institute will be structured to send a delegation to the University for the purposes of implementing the recommendations.

President Gless, who recommended the University to endorse the research institute, stated that, "the executive research board and the advisory committee for scientific advancement and the safety regulations which have been considered by the State Legislature." He continued, "the University has a high responsibility to protect public schools and we see the potential damage that could occur to students if we do not make the improvements that are necessary.

Vacant Campus Positions Available

Information about the following campus job opportunities is available from the Personnel Office, 7-2026; PTT-31, Assistant or Associate Vice President for Academic Affairs, PTT-32, Dean of Undergraduate Studies, PTT-37, Academic Advisor, University College; PTT-22, Assistant Director, School of Education; PTT-34, Associate or Full Professor, Paraguay, etc.

CAMPUS BRIEFS

Lena Pupin, director of the Academy of Fine Arts and the Executive Council of the National Academy of Fine Arts, Glenville, Maryland, will retain a three-year position on the Campus Community Council Committee. She is a member of the Executive Staff, Committee. The annual academic scholarship is provided by the New York State Board of Education, CC 30. The program will be followed by Dr. Pupin in recent years.

Kemneth Buttenheim, of Salina, 62, headed the Bunting Foundation, Unity to the University Council for a year.

New York Enacts Marijuana Reform Law

by Dan Galbraith

There will be no revolution in our interstate because Governor Hochul’s announcement of the legalization of marijuana on July 7, 2021, was a significant step forward in this long battle. The legislation signed into law on July 7, 2021, legalizes the sale and possession of marijuana for adults 21 and over, up to a maximum of 3 ounces. The new law also includes provisions for the regulation of marijuana businesses, the establishment of marijuana regulatory boards, and provisions for the enforcement of the new laws.

The new law also includes provisions for the regulation of marijuana businesses, the establishment of marijuana regulatory boards, and provisions for the enforcement of the new laws. It is estimated that the legalization of marijuana will bring in $375 million in tax revenue for the state of New York, with an additional $500 million in economic activity resulting from the opening of new businesses.

The new law is expected to have a significant impact on the black market, which is estimated to be worth $1.7 billion per year. By legalizing marijuana, the state will be able to regulate the industry and bring in legitimate tax revenue.

The legislation also includes provisions for the expungement of past marijuana convictions for those who have completed their sentences. This will help to clear the records of those who have been unfairly targeted by the war on drugs.

The new law is a significant step forward in the fight for justice and equality. It is estimated that the legalization of marijuana will bring in $375 million in tax revenue for the state of New York, with an additional $500 million in economic activity resulting from the opening of new businesses.

The legislation also includes provisions for the expungement of past marijuana convictions for those who have completed their sentences. This will help to clear the records of those who have been unfairly targeted by the war on drugs.

Captive breeding of Peregrine was first achieved by Dr. Hein Meng, a professor at the University of New Mexico, in the 1960s. The use of eggs from the Pigeon and Rock doves, and the breeding of the birds at the same time, has been successful in the United States and Europe. The goal of this method has been to increase the population of Peregrines, which has been declining due to habitat loss, hunting, and other factors. The Peregrine Project has been an important factor in the recovery of the Peregrines in the United States and Europe.
**LETTERS**

**View from the Sidelines**

To the Editor:

Ah yes, the tennis season is here again. The courts are filled with tennis players, and, unfortunately, the admittance is overcrowded with would-be tennis players. I would like to speak in behalf of the would-be's.

Last year, the university provided an hour-long limit on the courts. It is my understanding that a lot of money was lost in the process, and that it will not be continued. We students are now left to our own recognizance.

I have had my own experiences with tennis players. For all I know this "recognizance" exists. In tennis, it is not uncommon to wait more than an hour for a court. One morning I was standing near the entrance to the court. I heard a player say, "I thought I had a reservation." I had known I was going to be late, but I didn't think she was waiting for me.

Obviously, this doesn't apply to everyone, but no one should do that to everyone, and those who do stay on them and three hours all day are losing away from their time -- and yours too.

If the number five ...

Charles Taylor

**Shall We Overcome?**

To the Editor:

Have SUNY students demanded their say in this university? No. Have they filed petitions or organized rallies in order to secure a voice in University policy? No. What have SUNY students done? They have sat upon their hands and let the administration impose on their heads, that is what.

That's right folks, in case you haven't noticed, SUNY students are apathetic -- they open their minds only to realize that they would be held to a standard of thought they are not accustomed to and, like it or not, that's the world we live in.

Well, Simon, what are you going to do about it? Maybe the administration will change our name again for 80 grand. Maybe our protest will become an issue for the students, and maybe the students will become the voice of the University. Only time will tell. But for now, let's keep our eyes open and our minds alert.

Charles Taylor

Behind Every Statistic, A Silver Lining

It's easy to plan to make some mark on the field of journalism, to become a journalist. The job demands are high, but the rewards are great. Maybe it's the thrill of the Woodward and Bernstein or the ink and paper of the New York Times. Or maybe it's the challenge of uncovering corruption or the satisfaction of telling a story that will change the world. Whatever your motivation, becoming a journalist requires dedication, hard work, and a commitment to truth.

But it's not all glamour and glory. The path to becoming a journalist is not without its challenges. There are long hours, tight deadlines, and constantly changing landscapes. It's a job that requires resilience, adaptability, and a willingness to learn and grow.

Yet, for all the challenges, the reward is immense. The ability to tell stories that matter, to hold power to account, and to make a difference in people's lives is a powerful motivator.

So if you're considering a career in journalism, remember: behind every statistic, there's a silver lining. It may be difficult, but it's also incredibly rewarding. And the stories you tell can make a real difference.
DISTORTION.

It's easy to adopt a distorted view of academic issues, social concerns, financial matters and life in general here at SUNYA. The overpowering imagery of the architecture combined with the complex machinations and intricate bureaucracies of a university of this caliber and size can sometimes strongly influence its captive — and sometimes captivated — audience. The pressures of taking responsibility for your own life for the first time, including the endless obligations of academia, can easily consume most of your waking hours.

DON'T LET IT HAPPEN TO YOU.

Try to become an informed audience. Insist on knowing all the facts, on hearing all sides of an issue. Become involved. Don't let four years go by without leaving the imprint of your teeth—marks somewhere on this university. Sometimes it bites back, but don't be afraid to use your voice — and make damn sure the rest of the world hears you. Write for the Albatross Student Press. The loudest voice on campus. Remember, communication is what journalism is all about.

Wouldn't it be a shame?

Consider:
- What's the point of having a college education if you can't make the most of it?
- Why spend four years in college if you can't afford to?

You're only in college a short time.

Wouldn't it be a shame if all you got was a degree?

Hold the pickle, hold the lettuce.

Freshmen really don't upset us.

You've heard us say it. Now let us prove it.

Instead of wasting your time and energy at Burger King, why not spend some time at the Albany Student Press. Contribute the way you decide it should be done.

Burger King has sold over 23 billion hamburgers.

Burger King is located in the middle of campus.

Burger King: like being in love.

Burger King employees are like being in love too.

Burger Kings is many and varied.

In addition, a Burger King hamburger doesn't have all that many years on your hands. After all, you're the one who gets the blame if you don't eat it. Why not do your part for campus reform? Why not join the Burger King boycott?
by Leslie Snyder

This past weekend at the South Hall, the New York State Women's Conference approved the ERA, abortion, and labor rights, among other issues.

As I sat there, I was constantly thinking of all the women who had worked for this accomplishment, trying to imagine what it would have been like for them. It was a very emotional experience, and I couldn't help but feel grateful for all the women who had fought for this new era.

The resolution discusses the ERA as a necessary step to ensure equal rights for women, and it calls for the passage of the Equal Rights Amendment. It also recognizes the role of women in the labor force and advocates for better working conditions.

I was struck by the diversity of the attendees, representing different ages, backgrounds, and experiences. It was clear that this was a movement that went far beyond political boundaries.

Supporters of the resolution spoke passionately about the need for change and the importance of achieving gender equality. They shared personal stories of discrimination and inequality, and their words resonated with the audience.

The day ended with a rally in the main hall, where speakers encouraged everyone to continue fighting for women's rights. It was a powerful moment, and I felt a sense of hope and possibility.

Overall, it was a moving experience, and I hope that this resolution will help bring about real change for women in the future.
America Suffering From Scientific Stagnation

By Paul Ehrlich

In the past few months a number of articles and editorials have warned that America was losing its edge in the scientific and technological arena. According to many observers, the United States is at risk of falling behind in the development of new materials, new energy sources, new medical treatments, and new computer technologies.

The problem, they say, is that America is not investing enough in research and development. The federal government has cut funding for basic research, and many universities and corporations have also reduced their spending on scientific research.

Ehrlich argues that this is a serious problem because scientific progress is essential for maintaining America's global leadership. He cites examples of countries like Japan and Germany, which have invested heavily in research and development, and are now leading the world in many areas.

Ehrlich suggests that the United States needs to increase its spending on scientific research if it wants to maintain its position as a global leader. He also calls for more collaboration between government, industry, and academia to support scientific innovation.

Loudspeakers: The Weakest Link in the Chain

By Eric Osborne

In this series of articles, the term "loudspeaker" is used to refer to a device that produces sound waves from electrical energy. In other words, a loudspeaker is a transducer that converts electrical energy into sound energy.

The loudspeaker is an essential component of any sound system, yet it is often the weakest link in the chain. This is because loudspeakers are subject to a wide range of factors that can affect their performance.

One of the main reasons for this is the complexity of the materials used in loudspeaker construction. From the drivers to the cabinets, each component must be carefully designed and manufactured to ensure optimal sound quality.

In this article, Osborne explains the various factors that can affect loudspeaker performance, and offers tips for selecting the best components for your system.

The Slow Search for a Stereo

By Bob Egan

Buying a stereo system can be a daunting task. With so many options available, it can be difficult to know where to start.

Egan offers some advice on how to approach the stereo market, and provides tips for selecting the best components for your needs. He also discusses the importance of considering your lifestyle and budget when making your purchase decision.

He concludes by recommending a particular system that he feels is well balanced and provides good value for the money.

SUNYA Public Safety: Ready, Aim, Fire, Smile

Page 9

Summer Student Press Conference

Director John Hentzine said, "The more expensive ones can be used while in motion." The Speed Gun I costs about $8,000, about half the price of a more sophisticated model.

Once again, the gun mainly focuses on the spots of every car that passes within the range. The electronic device continuously monitors the speed of vehicles passing, then relays the information to a central control room. The information is then displayed on a monitor, allowing officers to respond to traffic violations.

While the Speed Gun I is effective in its own right, the SUNYA Police Department also uses additional tools to combat traffic violations. The Police have installed cameras on various locations throughout the campus, allowing them to monitor traffic flow and respond to incidents quickly.

The SUNYA Police Department, under the leadership of Director John Hentzine, is committed to maintaining a safe and secure environment for all members of the SUNYA community.通过实施先进的监控技术和加强巡逻，SUNYA Public Safety aims to ensure a safer campus environment for students, faculty, and visitors alike.
I haven't seen "Jenny"; Todd told me she was out west somewhere, sitting behind the "We open it on our repairs" sign in the store. I let her go, then wrapped her up carefully, and when I got home I was surprised to find that she was still there. She had a name, I mumbled, and there was no way I was going to let her out of my sight.

"WHY WOULD A NEW YORK STUDIO ENGINEER LIKE ME RECOMMEND SEIDEN SOUND?"

The reason is simple. I want you to get everything out of a recording that I put in.

What do I put in? Hours and hours of work, first of all. Getting just the right sound from every musician—before I even start rolling tape. And by the time I'm finished recording the music, it'll have passed through over $50,000 worth of highly sophisticated microphones, consoles, equalizers, limiters, multi-track recorders, monitors, lathes, and more.

To get all that out, you need someone who knows as much about playback as I know about recording. That's Seiden Sound.

They've got the experience to customize a system to the characteristics of your room, and the qualities of the music you like. And they do it within the limits of the budget you set.

I recommend them because they're the best. The leading upscale sound dealer, with more brands, convenience, experience and expertise.

Seiden Sound does everything better, right down to warranties and payment plans.

Seiden Sound. What I produce, they know how to reproduce.

Rich Peterson, Twelve East Recording New York, N.Y.

---

"The Saga of Turntables and Phonos Cartridges"

by Mike Collins

I was recently asked that, in general, phono cartridges were like a limited selection of music with the emphasis on the "limited" part of it. All music, from the finest classical to the most raucous rock, is stored in the cartridge and make-up of the pickup system. The pickup is like the fountain in the center of town where we all gather to talk to one another. The pickup is the center of the hifi world, and it determines the quality of the music we hear.

Many people are familiar with the concept of the pickup, but few know how it works. The pickup is a complex device that consists of a stylus, a needle, a tonearm, and a phono cartridge. The stylus is the part of the pickup that comes into contact with the record and is responsible for reproducing the music. The needle is the part of the stylus that actually makes contact with the record and is responsible for reproducing the music. The tonearm is the part of the pickup that supports the stylus and is responsible for keeping the stylus in the proper position on the record. The phono cartridge is the part of the pickup that converts the mechanical vibrations of the stylus into electrical signals that can be amplified and reproduced through a hifi system.

One of the most important parts of the pickup is the phono cartridge. The cartridge contains the stylus, the needle, and the tonearm, and is responsible for reproducing the music. The cartridge is designed to work with a specific type of record, and if the cartridge is not matched to the record, the music will not be reproduced accurately.

There are many different types of cartridges available, each with its own characteristics. Some cartridges are designed for use with classical music, while others are designed for use with rock music. The characteristics of the cartridge will determine the quality of the music that is reproduced.

A good cartridge will reproduce the music accurately, and will provide a clear, detailed, and musical sound. A bad cartridge will reproduce the music poorly, and will provide a muffled, inaccurate, and musical sound.

In conclusion, the cartridge is the single most important part of the pickup, and it is essential to choose a cartridge that is matched to the type of record and the type of music that you want to hear. A well-chosen cartridge will provide a clear, detailed, and musical sound, and will make all the difference in the world when it comes to reproducing music on a hifi system.

Newly-hatched.

Starting tomorrow, the first-offense penalty for possession of up to 25 grams (1 ounce) of marijuana in New York State is a fine of not more than ONE HUNDRED DOLLARS. Possession of up to two ounces may get you a fine of up to FIVE HUNDRED DOLLARS and/or three months in the clink.

It’s still against the law to have pot in your possession though.

More Services For Off Campus Dwellers

by J. Paesal Barbady

It was a relief for some college students to live off campus, but when their parents’ homes were a source of conflict, it was a relief for them to live off campus. In the city, though, it can be a relief for some.

For those off-campus students who tell in a survey or in course grades in college, a new service is being offered. The Off Campus Association, Inc. (OCA) has, roughly, an $18,000 budget and a membership of 1,400 students.

Contact with the OCA is through a representative, who has a list of services available. For instance, the OCA offers a monthly newsletter, which includes information on events, news, and resources.

In fact, the newsletter is one of the most popular services offered by the OCA. It provides updates on events and news, as well as resources for students who are looking to get involved in the community. The newsletter is sent out on a monthly basis, and it is available online for students who are interested.

Recently, the OCA has added a new service to its list of offerings. The OCA has partnered with a local charity to offer a monthly food delivery service to students who are in need.

The service is available to students who live off campus and who are interested in receiving a monthly delivery of food. The service is funded by the OCA, and it is available to students who meet certain criteria.

The OCA is also working on a new service for students who are interested in finding housing. The OCA has partnered with a local real estate agency to offer a service that helps students find housing.

The service is available to students who are interested in finding housing, and it is available online. The service is funded by the OCA, and it is available to students who meet certain criteria.

The OCA is committed to providing services to students who are interested in living off campus. The OCA is looking forward to offering more services in the future, and it is dedicated to providing the best possible service to its members.
INSIDE

DNA Research: Monsters From Microbes

by Maitz Schwartz

We've known recombinant DNA techniques could create disease-causing microbes. But now, it seems, the scientists working on this research have discovered a way to create even more dangerous organisms.

Scientists and bioethicists have long debated the potential dangers of recombinant DNA techniques, but now, at SUNYA, the debate has taken a new turn. An independent committee has been formed to review the work being done, and it has already uncovered some disturbing findings.

One of the main concerns is the potential for the creation of new, highly virulent strains of bacteria. These strains could be used as weapons of mass destruction, or they could escape into the environment and cause widespread illness and death.

The committee has also found evidence of a covert laboratory that is working on the creation of new, highly dangerous organisms. This laboratory is said to be part of a larger network of illegal bioengineering firms that are operating around the world.

The committee's findings are desperate, and it is clear that more needs to be done to ensure the safety of this research. Until then, the potential for these monsters to emerge is very real.

A Barely Bareable Hot Summer's Day

by Richie McManus

I was walking along the city streets on a hot summer day, heading toward the street vendor who sold the ice cream I craved. It was a hot day, with a string of bright sunny days behind me. I was walking without contacting recombinant DNA material.

A pair of voracious short waves striped down the TV image to the vending machine. An hour later, I was still holding it in my hand. I'm sure the departmental policy requires a written plan, but the guidelines are vague. Nonetheless, I'm sure it's illegal.

The lab in use goes beyond the DNA machine in that it has its own small laboratory for sterilization, as well as another small laboratory for sterilization. The departmental policy requires a written plan, but the guidelines are vague. Nonetheless, I'm sure it's illegal.

I'm sure the departmental policy requires a written plan, but the guidelines are vague. Nonetheless, I'm sure it's illegal.

A Barely Bareable Hot Summer's Day

Dazzling Star Wars Sparkles Galactic Green

by Dan Galvez

The box office has been booming since the release of Star Wars: The Force Awakens. The movie has taken the world by storm, breaking records and captivating audiences of all ages. With its charming cast, stunning visuals, and thrilling action sequences, the movie has proven to be a smash hit.

The film follows the story of a young boy named Luke Skywalker, who is taken under the wing of his Jedi mentor, Obi-Wan Kenobi. Together, they embark on a quest to save the galaxy from the evil forces of the Empire.

The movie’s success has been attributed to its entertaining storyline, talented cast, and impressive special effects. Director J.J. Abrams has been praised for his ability to create a visually stunning and emotionally engaging film.

In addition to its box office success, the movie has also received critical acclaim. Many reviewers have praised the film’s storyline, characters, and production values.

The movie’s success has also had a positive impact on the movie industry. Disney has announced plans to release additional Star Wars films, and the franchise is expected to continue to grow in popularity.

Overall, Star Wars: The Force Awakens has been a massive success, earning critical acclaim and breaking box office records. The movie is a testament to the enduring appeal of the Star Wars franchise and the power of storytelling.
