Summary Information

Repository: M.E. Grenander Department of Special Collections & Archives
Creator: State University of New York at Albany, Department of Biological Sciences
Title: Department of Biological Sciences Records
ID: ua623
Date [inclusive]: 1936-1988
Physical Description: 5 cubic ft.
Physical Location: The materials are located onsite in the department.
Language of the Material: English
Language of the Material: English
Mixed Materials [Collection]: X
Abstract: Biology seminar reports, laboratory manuals, proposals for departmental program development, and staff meeting minutes for the academic biological sciences department.

Preferred Citation

Preferred citation for this material is as follows:

Identification of specific item, series, box, folder, Department of Biological Sciences Records, 1936-1988. M.E. Grenander Department of Special Collections and Archives, University Libraries, University at Albany, State University of New York (hereafter referred to as the Department of Biological Sciences Records).

Administrative History

Today, the objective of the department [of biological sciences] is to provide
the undergraduate student with a broad background in the biological sciences and adequate supporting
strength in the physical sciences.[2] Todays department also offers a Bachelors degree in the Arts and
Sciences, a Masters degree, a B.S./M.S. combination program, and a Doctor of Philosophy degree.
Undergraduates can take interdisciplinary programs in both human biology and biochemistry and
molecular biology. Graduate students have the option of taking the Biodiversity, Conservation, and
Policy program, or the Forensic Molecular Biology program. PH.D. degrees are offered in two main
areas; Molecular, Cellular, Developmental and Neural Biology, along with Ecology, Evolution and
Behavior. A joint seven-year biology/optometry program with SUNY-Optometry is also available to
students who wish to get a Doctor of Optometry degree.

The Executive Committee of the New York State Normal School at SUNY Albany started teaching
in 1845, under the heading of Natural Science.[3] On March 15, 1845 the first faculty member of the
department was employed at the school. Merritt G. McKoon was appointed assistant teacher of Natural
Science.[4] Due to the schools purpose of training teachers for grades one through eight at this time, all
sciences were taught under the rubric of Natural Science (also called Natural Philosophy). Unfortunately
for Professor McKoon, he abruptly resigned on June 9, 1845, on account of the extreme sickness of
his family.[5] With Professor McKoons sudden departure, William W. Clark to took over teaching the
course while still a student at the school. He was paid $60 for his services.[6] Clark was kept on as a
teacher of both natural philosophy and chemistry after he graduated on August 27, 1845.[7]

The first class on physiology was taught in 1846 by the schools principal, David Page.[8] Between
1851 and 1861, due to a rapid series of resignations, there were nine different teachers who taught
natural philosophy.[9] Beginning in 1854, and lasting throughout the rest of the nineteenth century, the
professors who taught natural philosophy were technically known as Professors of Natural Science;
both being general science.[10] In 1868 botany was added as a course, to go along with physiology and
natural philosophy.[11] These three courses remained the staple of the biology program until 1890 when
zoology was added to the curriculum. This expansion of classes caused the school President, on January
12, 1889, to expand the number of faculty members for the department from one to two. Miss E. Helen
Hannahs, an 1884 graduate from the Normal School at Albany, became the first female teacher in the
field of natural science at Albany.[12] In 1890 the school changed from teaching both subject matter
and methods of teaching to strictly methods of teaching.[13] In 1891 the word science first was used,
replacing natural philosophy.[14]

In 1898 Charles S. Gager became the first professor to be hired under the newly introduced heading
of Biology Professor.[15] In 1904 the school reintroduced subject matter to the curriculum, and the
Department of Biological Science was formed. Eight biology classes were offered during this year, with
Dr. Gager teaching six of them.[16] The initial reintroduction of subject matter as opposed to pedagogy
was confirmed in December 1905 when the Normal College was made a four-year liberal arts college
for teachers with the same standards as other New York colleges of good standing. In 1914 biology was
listed as an available minor for the first time in the Annual Circular.[17] That same year the first Masters
thesis cataloged as a biology thesis, titled Theories of Immunity, was accepted from Alice M. Adams.
She was awarded a Master of Arts in Education degree.[18] In the mid-1930s the first graduate class in
biology was offered, and in 1944 an official list of graduate classes required by the department was made
available.[19]

In 1960, the SUNY Master Plan placed priority on the Masters and Doctoral programs at Albany.[20]
In 1962, the Masters program in biology was opened up to anyone who had the credentials to take it.
Previously it had been restricted to teachers.[21] In 1965 a Ph.D was offered in biology for the first time.
[22] Joseph T. Tupper received the first PH.D in 1970 with his thesis Microelectrode Studies on the Electrical Properties of Isolated Mitochondrial Membranes.[23] The B.S./M.S. combination program and the honors program were first listed in the schools undergraduate bulletin as being offered for the 1983-84 school year.[24] The interdisciplinary program of human biology was first offered in the school bulletin in 1990.[25] In 1992 the biochemistry and molecular biology program was first listed as available.[26] In 1997 Albany began offering a joint seven-year biology/optometry program with SUNY-Optometry for students to gain a Doctor of Optometry degree.[27] The Masters program has also expanded over time. Beginning in 1998 graduate students could take courses leading to a degree in Biodiversity, Conservation, and Policy.[28] In 2001 a sequence in Forensic Molecular Biology was made available. In the fall of 2003 the first students enrolled in this program upon its changing to a regular M.S. program.[29] In the rapid moving field of science, the biology program at SUNY Albany is continually evolving to meet the needs of society.

Scope and Contents

Arrangement of the Collection

The collection is unprocessed and is likely disorganized. Individual items may be difficult to find.
Administrative Information

Publication Statement
M.E. Grenander Department of Special Collections & Archives

Revision Description
Encoded in EAD by Gregory Wiedeman 2015

Processing Information
Processed in 2004 October by Orson Kingsley, History 599 Intern.

Access
Access to this collection is restricted because it is unprocessed. Portions of the collection may contain recent administrative records and/or personally identifiable information. While it is likely that portions of the collection may be viewed, access must be managed by an archivist.

Copyright
The researcher assumes full responsibility for conforming with the laws of copyright. Whenever possible, the M.E. Grenander Department of Special Collections and Archives will provide information about copyright owners and other restrictions, but the legal determination ultimately rests with the researcher. Requests for permission to publish material from this collection should be discussed with the Head of Special Collections and Archives.

Acquisition Information
These records were deposited in the M.E. Grenander Department of Special Collections & Archives, University Libraries, University at Albany.
